Introduction

Overview

DVDO-AudioE-1 is an HDMI2.0 audio extractor with resolutions up to 4K@60Hz (Chroma sub-sampling 4:4:4 8-bit) and HDCP 2.2.

Its digital or analog audio output allows audio to be de-embedded from HDMI input and sent to audio distribution system, such as AVR or Amplifier. Third-gear slide switch for audio setting in EDID has 3 EDID (pass-through, 2.0ch and 5.1ch) presets for EDID management.

By auto-detecting input signal status, it could automatically trigger CEC command to turn on or off TV with CEC support. It can be used in any AV application, such as homes, offices, digital entertainment centers, control centers, conference rooms, schools and corporate training environments which need HDMI audio extraction.

EDID Management

EDID (Extended Display Identification Data) is a data structure provided by a digital display to describe its capabilities to a video source.

The device features EDID management, should any device compatibility issues occur during installation, please refer to the table below and set up the EDID slide switch manually.

By default, the slide switch is set to “PASS” position.

Position	Descriptions
PASS (Default)	Allows EDID pass-through from the display to the source for optimal video and audio outputs to the display.
2.0CH	Transfers 2.0CH EDID of 4KCVH2H to the source for Optimum video and 2.0CH audio outputs to the display.
5.1CH	Transfers 5.1CH EDID of 4KCVH2H to the source for Optimum video and 5.1CH audio outputs to the display.

Note:

- If EDID Copy fails, a fixed 1920 x 1080P@60Hz 2.0CH would be provided to source device.
- In order to achieve a better user experience, please refer to the following audio support descriptions and examples for EDID setting during installation.
